

MARNOBA Project

Management protocol of marine litter on the beaches of the Spanish coasts

- ❑ Through the characterisation of marine debris on the beaches of Marine District of Gibraltar Strait and Alboran Sea, a management protocol of marine litter on the beaches of the Spanish coast will be developed
- ❑ The protocol will be a tool in the management of marine litter for public and private institutions as well as in the monitoring programs of marine litter (Marine Strategy Framework Directive).
- ❑ Data from the project will be useful in identifying the origin and sources and will serve as a guide for the proper management of marine litter by the competent in order to minimise the contributions and the problem.
